

ABSTRACT OF THE DISCLOSURE

A socket has a dark colored outer surface and a specification is rolled in the outer surface of the socket and coated with a brighter colored electroplating. The method for the surface treatment of the socket includes step of rolling an
5 specification in an outer surface of the socket; step of electroplating the socket with a light colored layer of electroplating; step of removing the light colored layer of electroplating from the outer surface of the socket, and step of coating a dark colored layer on the outer surface of the large section and the specification is not included. By the surface treatment, the specification is obvious from the dark colored outer
10 surface of the socket.
